

URBIS unifies assets, procurement, payroll, revenues, workflow and more on one governed platform. Each module is deep on its own, yet shares the same data, permissions, search and audit trail with the rest - so operations connect end to end and every action is accountable.

20 Integrated modules	AR·EN Multi-lingual, RTL-native	3 Layers of tenant isolation
---------------------------------	---	--

One system, Every operation

Fixed Assets Lifecycle, depreciation, leases (IPSAS 43)	Procurement Requisition to contract, three-way match
Workflow Engine Visual designer, fork / join, quorum voting	Correspondence Incoming, outgoing, memos and circulars
Human Resources Records, attendance, vacations, appraisals	Payroll Pay runs, payslips, posted to the ledger
Accounting IPSAS & IFRS ledger, budgets, cost centers	Revenues Tariffs, assessments, licenses, collection
Inventory Warehouses, stocktakes, serial & lot tracking	Meetings & Calendar Invitations, decisions, minutes, resources
Services & e-Forms Form designer, 20+ field types, certificates	Service Desk Your internal desk, and support from URBIS
Tasks Management Assign, track and close, with work logs	Reporting Templates, scheduling, watermarks, verified PDF
Analytics KPI dashboards, trends and forecasting	Fleet & Bookable Resources Vehicles, rooms and equipment in one record
Organization Structure The tree permissions and routing hang from	Global Search One index across every module, Arabic-aware
Integrations & API Scoped tokens, webhooks, SSO (OIDC)	Row-Level Security Rights that reach the row and the column

Why URBIS

- One integrated platform - no silos, no duplicate data entry.
- IPSAS & IFRS accounting, three-layer tenant isolation, attachments encrypted at rest.
- An audit trail past create, update and delete: approvals, printing, exports, file views.
- Row-level policies and governed access-on-behalf - scoped, time-boxed, no silent back doors.
- Arabic and English are RTL-native on every screen, not a translation layer added later.
- On-premise or cloud, and your data is exportable in full, at any time, in open formats.
- Integration services, a support portal with its own sign-in, and continuous releases.

Beyond the modules

Integration services We read the systems you run, agree the contract, then build it.	Support portal Its own sign-in: tickets, replies and licence state.
Mobile-responsive Approvals, tracking and fieldwork on phones and tablets.	Continuously evolving Built to global standards and your feedback, release after release.
